

Blockchain meets File Sharing

— o o o o —

CONTEXT

Thanks to Satoshi Nakamoto and Vitalik Buterin, Blockchain and Crypto technology is being recognized by many institutional and individual investors all over the world.

People are no longer dependent to centralized institutions like banks, state owned data centers, big corporations, or governments, which is why blockchain will be more than just a technology of the future.

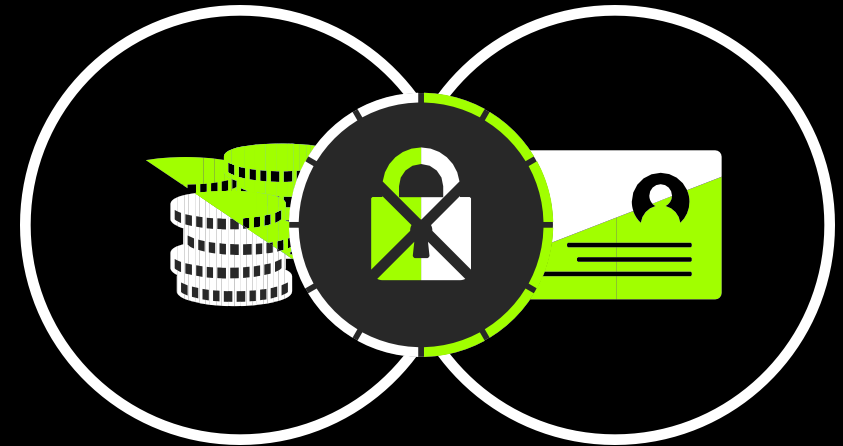

While embracing new opportunities, crypto and blockchain will also face new risks that all data we send to each other from all over the world, transferred on the blockchain, is completely transparent which will decrease the data privacy of every user participating of this new generation of technology.

And this is where Kryptox comes in place. Revolutionize the way we share digital data with each other, in a new digital world.

PROBLEM

Most centralized file sharing providers collect your private information and sell and use your data for commercial purpose without your permission or you even knowing it. They also often times are handling you data irresponsible, so your data gets in the wrong hands. When it comes to the first generation blockchain technology, your data can also be observed by anyone, as long as your address has been in contact with any big centralized, file sharing provider. Currently there is no solution to solve this problem and bring back the users right of their data privacy and ownership.

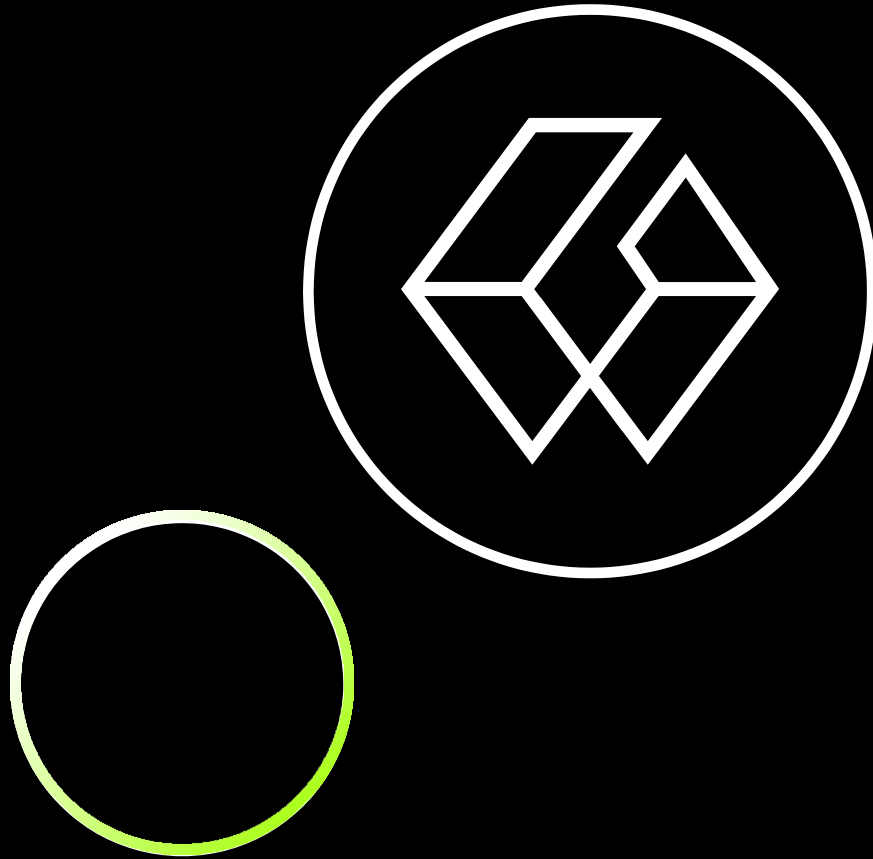

Kryptox is the first decentralized, blockchain powered file sharing provider to enhance privacy and data ownership through multiple layers of security and a new way we share our data online.

Kryptox will help you manage, transfer, share, and receive data and files from all over the world.

Kytpox is based on the ethereum blockchain, offering Kryptox users more bandwidth, quicker uploading speed, and maximum privacy and security for the whole file sharing process.

TECHNOLOGY

Kryptox is using the power of the Ethereum blockchain, to revolutionize the way we share things online.

Why Kryptox is using the Ethereum blockchain ?

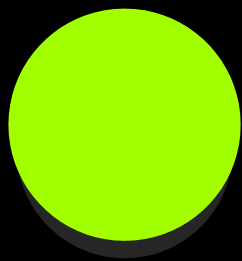

Currently Ethereum is by far the most popular blockchain supporting smart contracts, DeFi infrastructure, digital currency transactions and several other new technologies and applications.

Furthermore, with a large developer resources base and significant community support, Ethereum's development ecosystem provides a conducive environment for developers. By cooperating with Ethereum's Blockchain infrastructure, Kryptox will revolutionize the way we share our data online.

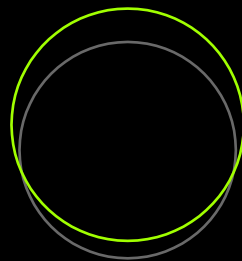

TECHNOLOGY

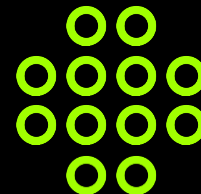

Kryptox will revolutionize the way we view file sharing online. With Kryptox your files will be encrypted split into small decentralized notes and distributed to a massive global blockchain network. Which is why Kryptox is secure by default.

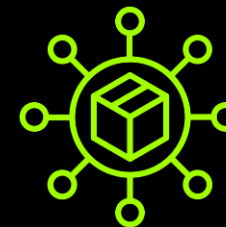

Your file

Encrypted

Split

Distributed

PLATFORM

Which need to be called :
Blockchain. Made. Simple

- * Maximum upload speed
- * User firendly interface
- * Maximum bandwidth
- * Multiple layers of security

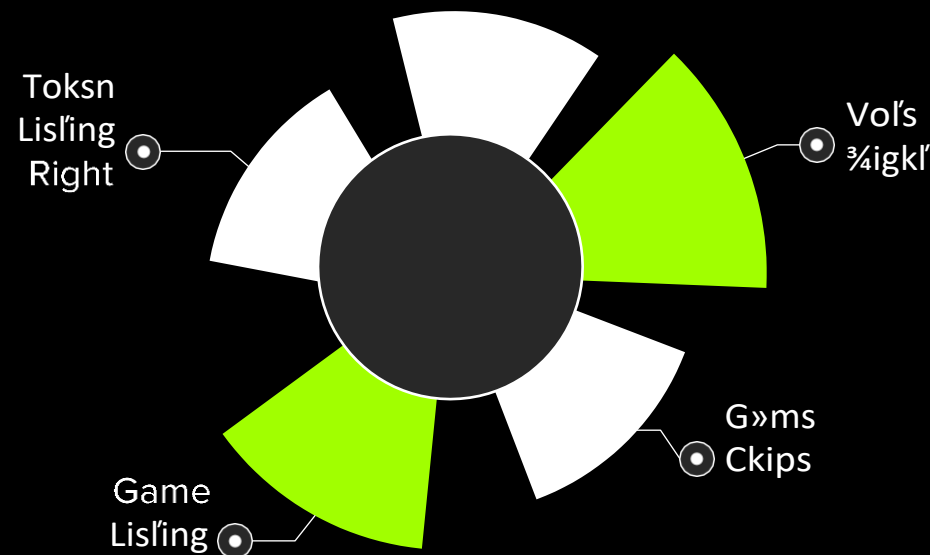

TOKEN STAKEHOLDER INSTRUMENTS

The Kryptox Token is not just a currency or an asset. It is a functional stakeholder instrument, to use the Kryptox infrastructure of products.

Stakeholders will be able to pay for digital services, like file sharing with Kryptox Token.

Kryptox goal is to become the biggest, most secure and easiest way for sharing digital data, contracts, currencies and other things, all over the world the world

CONTEXT

INVITATION SYSTEM

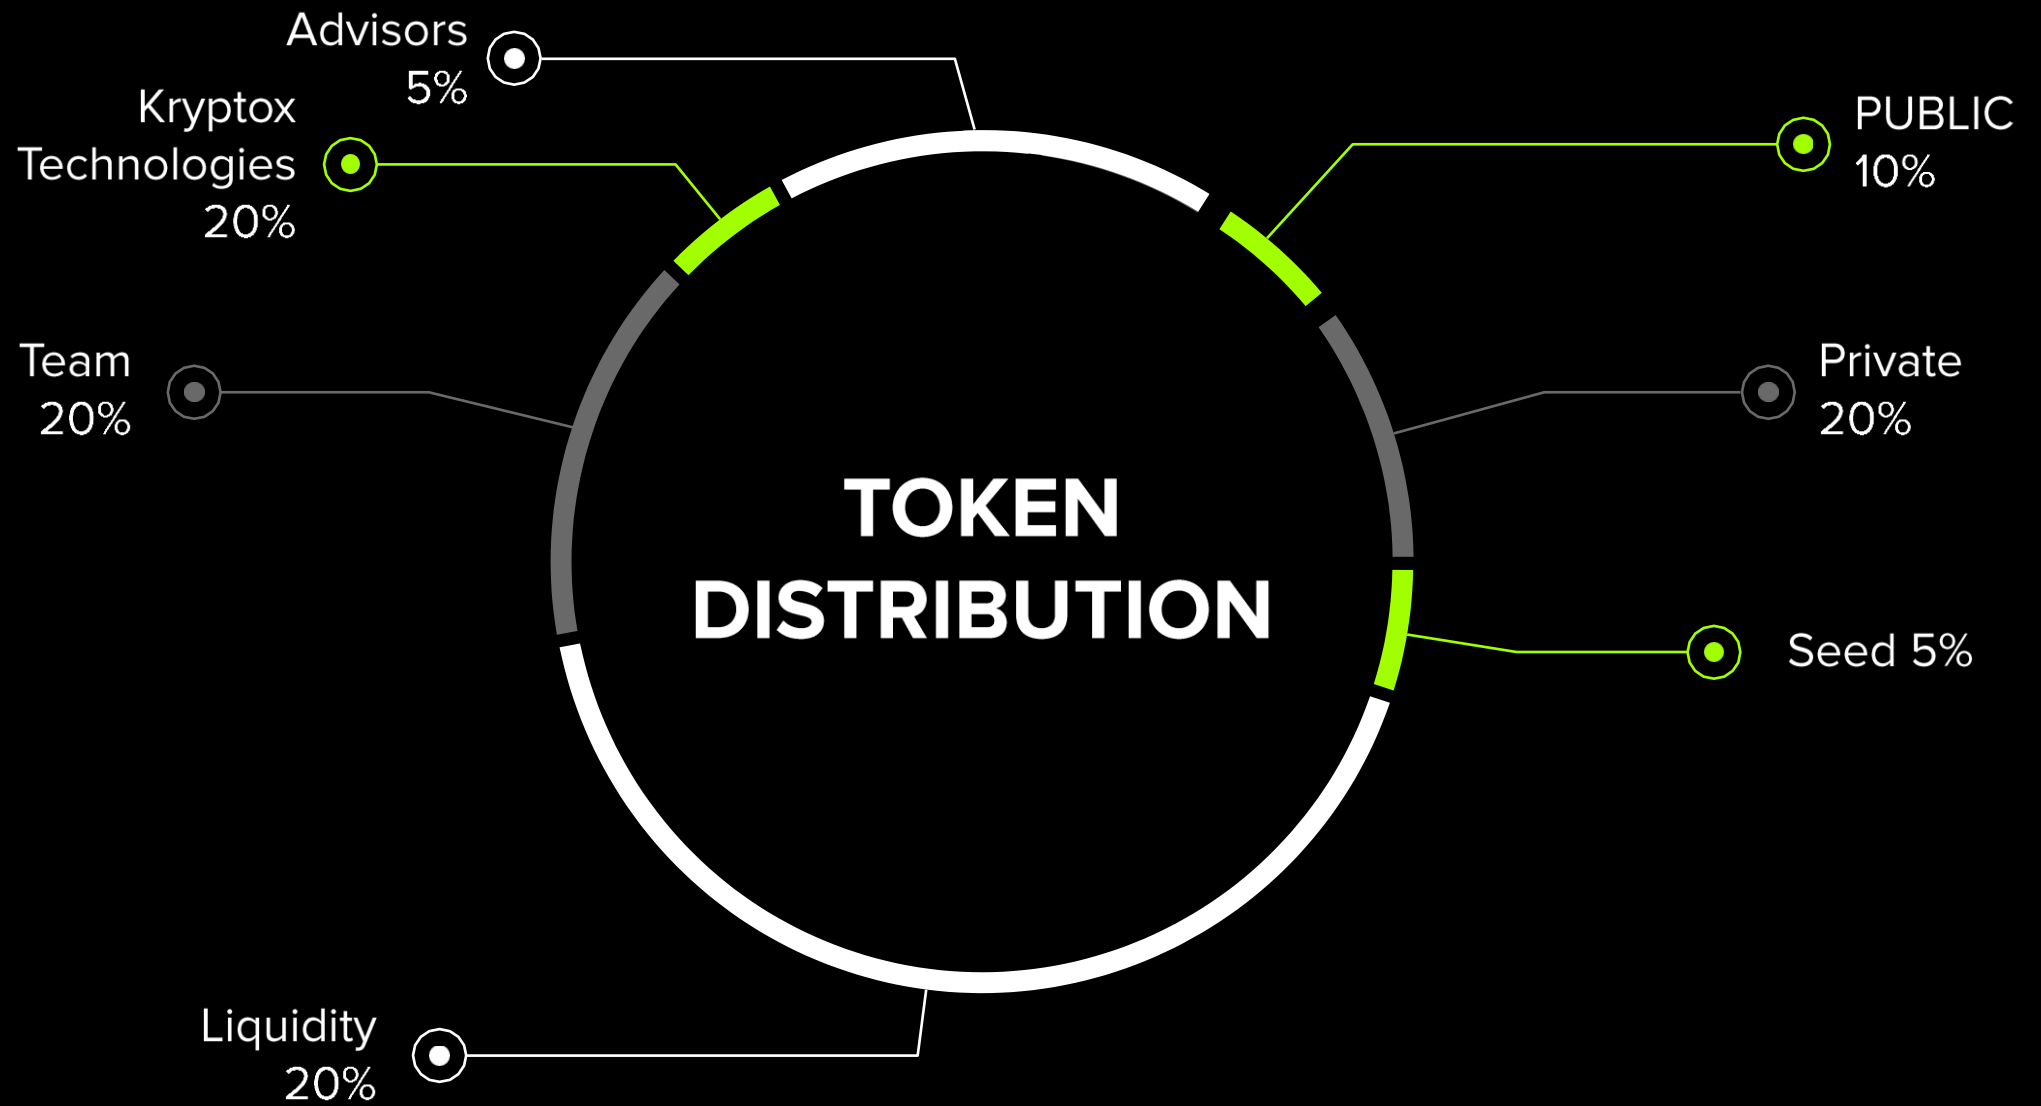

Kryptox gives it's users access to the Kryptox Invitation system.

Kryptox loyal users will enjoy multiple incentives, when they buy, hold, share Kryptox tokens and inviting new users to join the movement.

NFT REWARDS

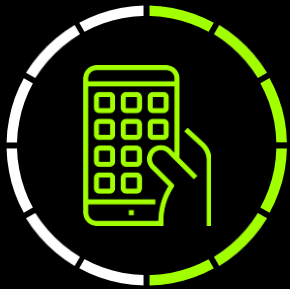

Kryptox users will get exclusive access to Kryptox ultra Limited, in-house designed NFTs. The users will have the chance to also regularly participate in a raffle to win Krpytox NFTs.

UPCOMING PRODUCTS

File Sharing is only the beginning. Kryptox will revolutionize the way we use the internet

Kryptox Mobile App

Share and receive data and files on your mobile phone from all over the world

Kryptox Cloud

Blockchain based, decentralized cloud storage

Kryptox Telefax

Blockchain based Telefax

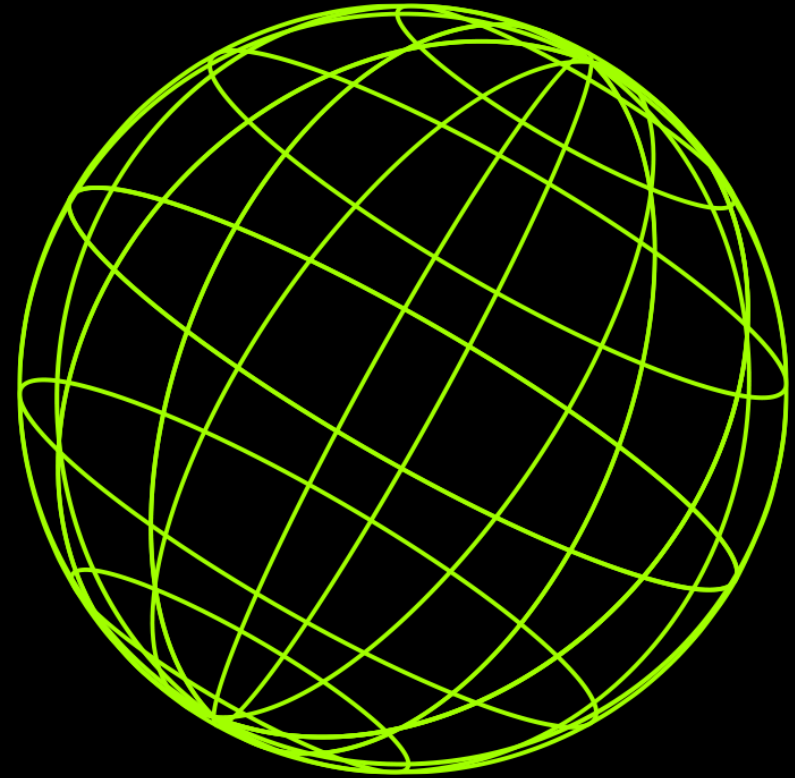

Kryptox Patenting

Patent your data, content and Intellectual property on a worldwide blockchain network

ENVIRONMENTAL APPROACH

Kryptox goal is to empower the world we use the web 3.0. By wasting less energy capacity and using the energy power of decentralized blockchain technology. That's why Kryptox will donate Kryptox Token to charity that are empowering the access to a digital infrastructure all over the world. Energy efficiency will be the future goal to build the next sustainable blockchain innovations and to help make this earth a better place.

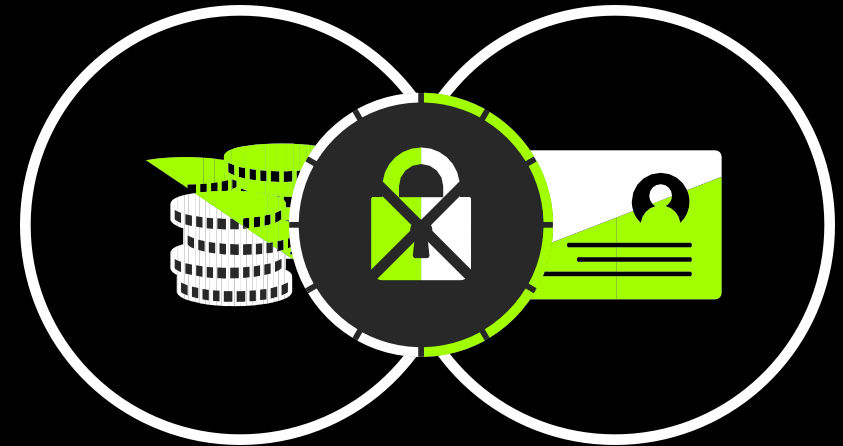

VISION

Kryptox has a clear vision for the future of the internet.

By revolutionizing the way we are viewing the internet and creating the new Web 3.0, Kryptox will build a infrastructure of products that will deliver its users the full range of decentralized applications, improving their lifes with advanced and next generation blockchain infrastructure and technology.

Getting Blockchain mainstream and accessible for future generations is the key to transform the internet from a controlled data monopoly, to a self managed, self controlled, free accessible ecosystem that benefits the users and not just centralized institutions, big corporations or governments.

The Kryptox infrastructure will be created, powered, operated and owned by it's users, benefiting each user of the Kryptox Blockchain movement.

The Privacy Shield of Crypto

Join the Kryptox movement and create the future
of file sharing
